AAY82571 to AAY82577 represent specifically claimed copolymer molecular weight TV-marker polypeptides from the present invention. The present inventions the molecular weight invention describes polypeptides (I) for determining the molecular weight of a copolymer (CP), which has an identified molecular weight and an amino acid composition corresponding to the copolymer. The polypeptides

Copolymer 1 related polypeptides used as molecular weight markers for glatiramer acetate and for treatment and prevention of immune diseases.

WPI; 2000-317499/27.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             cc of the invention are used as molecular weight markers for glatiramer calcated related tetrapolymers. The polypeptides may also be used for treating and preventing immune diseases in a mammal. Autoimmune diseases chick may be treated include either cell-mediated or antibody-mediated cliseases. Such diseases include arthritic conditions, demyelinating cliseases and inflammatory conditions, e.g. multiple sclerosis, rheumatoid arthritis, osteoarthritis, autoimmune haemolytic anaemia, autoimmune cophoritis, autoimmune thyroiditis, autoimmune uveoretinitis, Crohn's clisease, chronic immune thrombocytopaenia purpura, colitis, contact sensitivity disease, diabetes mellitus, Graves disease, Giillain-Barre's syndrome, Hashimoto's disease, diopathic myxoedema, myasthenia gravis, psoriasis, pemphigus vulgaris, or systemic lupus crythematosus. Mediated-mediated diseases which can be treated include host-versus-graft disease, graft-versus-host disease, and delayed-type hypersensitivity. The polypeptides of the invention have defined molecular weights and physical properties which are analogous to glatiramer acetate molecules, which which were as molecular weight markers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       cc weight TV-marker polypeptides from the present invention. The present convention describes polypeptides (I) for determining the molecular weight cof a copolymer (CP), which has an identified molecular weight and an candid composition corresponding to the copolymer. The polypeptides cof the invention are used as molecular weight markers for glatiramer cof the invention are used as molecular weight markers for glatiramer corresponding to the copolymer. The polypeptides cof the invention are used as molecular weight markers for glatiramer correct treating and preventing immune diseases in a mammal. Autoimmune diseases which may be treated include either cell-mediated or antibody-mediated corrections. Such diseases include arthitic conditions, demyelinating codiseases and inflammatory conditions, e.g. multiple sclerosis, rheumatoid componentis, autoimmune haemolytic anaemia, autoimmune copoporitis, autoimmune thyroiditis, autoimmune uvecoretinitis, contact cophoritis, autoimmune thyroiditis, autoimmune uvecoretinitis, contact cophoritis, autoimmune thyroiditis, autoimmune uvecoretinitis, contact cophoritis, autoimmune thyroiditis, draves disease, Guillain-Barre's syndrome, Hashimoto's disease, idiopathic myxoedema, myasthenia gravis, copariatis, pemphigus vulgaris, or systemic lupus erythematosus, Mediated-comediated disease, which can be treated include host-versus-graft disease, copypeptides of the invention have defined molecular weights and physical corrections which are analogous to clativamer actors a which can be considered molecular weights and physical corrections where the which are analogous to clativamer actors a which can be considered molecular weights and physical corrections which can be considered molecular weights and physical corrections and considered molecular weights and physical corrections are considered analogous to clativamer actors a considered molecular weights and considered considered analogous to clativamer actors and considered considered considered considered considered considere

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 AN ANY82571 to ANY82577 represent specifically claimed copolymer molecular CC weight TV-marker polypeptides from the present invention. The present cc invention describes polypeptides (I) for determining the molecular weight of a copolymer (CP), which has an identified molecular weight and an CC amino acid composition corresponding to the copolymer. The polypeptides CC in the invention are used as molecular weight markers for glatiramer CC acetate related tetrapolymers. The polypeptides may also be used for CC treating and preventing immune diseases in a mammal. Autoimmune diseases which may be treated include either cell-mediated or antibody-mediated CC diseases. Such diseases include arthritic conditions, demyelinating CC diseases and inflammatory conditions, e.g. multiple sclerosis, rheumatoric contribis, osteoarthritis, autoimmune uvecertinitis, Crohn's CC disease, Chronic immune thyroiditis, autoimmune uvecertinitis, Crohn's CC disease, Chronic immune thyroiditis, autoimmune uvecertinitis, Crohn's CC syndrome, Hashimoto's disease, didopathic myxoedema, myasthenia gravis, CC syndrome, Hashimoto's disease, idiopathic myxoedema, myasthenia gravis, CC psoriasis, pemphigus vulgaris, or systemic lupus erythematosus. Mediated-mediated disease which can be treated include host-versus-graft disease, CC graft-versus-host disease, and delayed-type hypersensitivity. The CC graft disease, and delayed-type hypersensitivity and physical properties which are analogous to glatiramer acetate molecules, which can makes them ideal for use as molecular weight markers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                    S
                                                                                                                                                                                                                                                           RESULT 5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      actate related tetrapolymers. The polypeptides may also be used for treating and preventing immune diseases in a mammal. Autoimmune diseases which may be treated include either cell-mediated or antibody-mediated diseases. Such diseases include arthritic conditions, demyelinating conditions, demyelinating autoimmune there is autoimmune the autoimmune haemolytic anaemia, autoimmune coophoritis, autoimmune thrombocytopaenia purpura, colitis, contact sensitivity disease, diabetes mellitus, craves disease, dislated sensitivity disease, disease, idiopathic myxoedema, myasthenia gravis, psoriasis, pemphigus vulgaris, or systemic lupus erythematosus. Mediated mediated disease, and delayed-type hypersensitivity. The collipse coplypeptides of the invention have defined molecular weights and physical properties which are analogous to glatiramer acetate molecules, which can be treated include host-versus-graft disease, and delayed-type hypersensitivity. The coplyperties which are analogous to glatiramer acetate molecules, which

The polypeptides of the invention are used as molecular weight markers for glatiramer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 66 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AAY82571 to AAY82577 represent specifically claimed copolymer molecular weight TV-marker polypeptides from the present invention. The present invention describes polypeptides (I) for determining the molecular weight
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim 10; Page 14; 72pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Copolymer 1 related polypeptides used as molecular weight markers for glatiramer acetate and for treatment and prevention of immune diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gad A,
                                                                                                Recombinant copolymer 1-77, myelin basic protein analogue.

                                                                                                                                                                                                                                                                                                                              Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CC To improve the expression of rCOP-1 polypeptides in E. coli, genes coding CC for rCOP-1-77 were subcloned from pREV 2.1 to pBG3-2deltaN (deposit: 20-CC MOV-1984 US4691009, NRRL B-15910), a plasmid used to express Protein A. CC The resulting plasmids encode fusion proteins consisting of beta-cc cocurs between the Protein A, and rCOP-1 sequences. A methionine residue cocurs between the Protein A and rCOP-1 sequences, originating from the CC cocurs between the Protein A and rCOP-1 sequences, originating from the first on protein. rCOP-1-77 contains oligonucleotide duplexes incoding the following segments: YKK, EAE, KAK, AAK, and AAA. The N-CC terminal alanine residue is left behind following CNBr cleavage of the fusion protein. The product prevents or arrests experimental autoimmune coc demyelinating disorder, e.g. multiple sclerosis. They may also be used as additives to hair care products to confer beneficial effects on damaged hair or as supplements for diets deficient in certain amino acids. See also AAQ05665.                                           Ś
                                                                                                                                    Ś
                                                                                                                                                                                                                                                                                      CC encoding a polypeptide whose expression is inhibited by the antisense culletic acid; (2) a host cell containing the vector; (3) an isolated compounding a polypeptide whose expression is inhibited by the antisense compounding the vector; (3) an isolated compounding the vector; (3) an isolated compounding the polypeptide; (6) inhibited by the compounding the polypeptide; (6) inhibited by the compounding the polypeptide; (6) inhibiting cellular compounding the polypeptide; (7) identifying a compound that influences the activity of compounding the proliferation, or that inhibits cellular proliferation, (8) identifying a gene required for cellular proliferation or the biological pathway in which a proliferation required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound that inhibits and compound the strains is present in a culture or collection of compounding the extent to which each of the strains is present in a culture or collection of strains; or (13) identifying the target of a compound that inhibits the collection of an organism. The antisense mucleic acids are useful for cellular proliferation to isolate candidate molecules for rational cord discovery programs, or for screening homologous mucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, compound that inhibits the collection of the target prokaryotic essential genes. The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are: (1) a vector comprising a promoter operably linked to the nucleic acid; (2) a host cell containing the vector; (3) an isolated cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the antisense cell containing the vector; (3) an isolated cell polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation or the activity of a gene in an operon required for the gene product or that has an activity against a biological pathway in which a proliferation, or that inhibits cellular proliferation of corganism acts; (9) manufacturing an antibiotic; (10) profiling a compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound a activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent to which each of the strains is present in a culture or collection of compound a activity ing the target product is overexpressed or an activity of a compound that inhibits proliferation of an organism. The antisense nucleic acids are useful for compound that proliferation of containing the extent to which each of the strains is present in a culture or collection of containing proteins or screening for homologous nucleic acids required containing an antisense nucleic acids required containing antisense nucleic acids are useful for cellular proliferation in cells other than S. aureus, S. typhimurium, contained the printed specification, but was obtained contained contained the printed specification, but was obtained contained contained the printed specification, but was obtained contained the containing the sequence data for this process.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             밁
the 6213 antisense sequences given in the specification where expression CC of the nucleic acid inhibits proliferation of a cell. Also included are: CC (1) a vector comprising a promoter operably linked to the nucleic acid concoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated CC polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular CC proliferation or the activity of a gene in an operon required for CC the gene product or that has an activity against a biological pathway CC required for proliferation, or that an activity against a biological pathway CC required for proliferation, or that inhibits cellular proliferation; (8) dentifying a gene required for cellular proliferation or the biological pathway in which a proliferation-required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an order and that inhibits proliferation of an order and compound that inhibits are proliferation or an order and compound that inhibits proliferation of an order and compound that inhibits proliferation of an order and compound that inhibits are proliferation or an order and compound that inhibits are proliferation or an order and compound that inhibits are proliferation or an order and compound that inhibits are proliferation or an order and compound that inhibits are compound that inhibits are compound that inhibits are compound
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              21-MAR-2001; 2001US-00815242.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   compound's activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent to which each of the strains is present in a culture or collection of strains; or (13) identifying the target of a compound that inhibits the proliferation of an organism. The antisense nucleic acids are useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S aureus, S typhimurium, K pneumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryotic essential genes, Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from MIPO at
                         To improve the expression of rCOP-1 polypeptides in E. coli, genes coding for rCOP-1-19 were subcloned from pREV 2.1 to pBG3-2deltaN (deposit; 20-NOV-1984 US4691009, NRRL B-15910), a plasmid used to express Protein A. The resulting plasmids encode fusion proteins consisting of beta-glucuronidase, protein A, and rCOP-1 sequences. A methionine residue
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AAR06446;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Recombinant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 421 AA;
occurs between the Protein A and rCOP-1 sequences, originating

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                5' linker sequence, in order that the COP-1 polypeptide may be cleaved from the fusion protesin. rCOP-1-19 contains oligonuclectide duplexes incoding the following segments: YKK, AAE, KAK, KEA, XKA, YEA, AKA KEA, and AAA. The N-terminal alanine residue is left behind following CNBr cleavage of the fusion protein. The product prevents or arrests experimental autoimmune encephalomyelitis. They are used to prevent, arrest or control a demyelinating disorder, e.g. multiple sclerosis. They may also be used as additives to hair care products to confer beneficial effects on damaged hair or as supplements for diets deficient in certain amino acids. See also AAQ05664. the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are:
(1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated

The invention relates to an isolated nucleic acid comprising any one of

Claim 25; SEQ ID NO 75047; 1766pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CC polypeptide or its fragment whose expression is inhibited by the cartisense nucleic acid; (4) an antibody capable of specifically binding CC antisense nucleic acid; (4) an antibody capable of specifically binding CC the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular CC proliferation or the activity of a gene in an operon required for groliferation; (7) identifying a compound that influences the activity of CC the gene product or that has an activity against a biological pathway CC required for proliferation, or that inhibits cellular proliferation; (8) CC capable of the test compound that inhibits proliferation of an CC compound's activity; (11) a culture comprising strains in which the gene CC or a gene on which the test compound that inhibits proliferation of an CC compound's activity; (11) a culture comprising strains in which the gene CC product is overexpressed or underexpressed; (12) determining the extent CC to which each of the strains is present in a culture or collection of CC strains; or (13) identifying the target of a compound that inhibits the collection of collection of an organism. The antisense nucleic acids are useful for identifying proteins or screening for homologous nucleic acids required CC proliferation of an organism. The antisense nucleic acids are useful CC drug discovery programs, or for screening homologous nucleic acids or required for proliferation in cells other than S. aureus, S. typhimurium, CC K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this content did not form part of the printed specification, but was obtained CC in electronic format directly from WIPO at

The present CC invention describes polypeptides (I) for determining the molecular weight of a copolymer (CP), which has an identified molecular weight and an CC amino acid composition corresponding to the copolymer. The polypeptides CC intenting and preventing immune diseases in a mammal. Autoimmune diseases which may be treated include either cell-mediated or antibody-mediated CC diseases. Such diseases include arthritic conditions, demyelinating CC diseases and inflammatory conditions, e.g. multiple sclerosis, rheumatory conditions, e.g. multiple sclerosis, crohn's CC disease, chronic immune thyroiditis, autoimmune uvecretinitis, Crohn's CC disease, chronic immune thyroiditis, autoimmune uvecretinitis, Crohn's CC sensitivity disease, dise

                                                                                                                                                                                                             맑
                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a nucleic acid transport system (NTS) for CC delivering nucleic acid into a cell. The NTS contains but is not limited CC to 5 components: (a) the nucleic acid or a macromolecule to be delivered; (C) a molety that recognizes and binds to a cell surface receptor or CC antigen or is capable of entering a cell through cytosis; (c) a nucleic acid or macromolecular molecule binding moiety; (d) a moiety that is CC capable of moving or initiating movement through a nuclear membrane; and/ CC or (e) a lysis molety that enables the transport of the entire complex CC from the cell surface directly into the cytoplasm of the cell. The NTS CC delivers nucleic acid into the cellular interior as well as the nucleus CC of specific cells. The NTS can be used to treat disorders by targeting Specific nucleic acid accordingly. The NTS can also be used to create transpent animals for assessing human disease, such as cancer, in an animal model. The NTS can be used in vitro with tissue culture cells specific expression into specifically targeted tissue culture cells. The NTS avoids the problem of endosomal/lysosomal
                                                                                                                                                                                                                                                                                                                                             Matches

to a cell, comprising a binding complex comprising a ligand binding CC molecule noncovalently bound to a nucleic acid and covalently linked to a CC surface ligand, and a second binding complex comprising a second binding CC muclear ligand. The complexes are simultaneously bound to the nucleic acid transporter system can also be used in a method CC for the in vivo targeting of the insertion of DNA into a cell. It can CC also be used in processes for producing transformed cell lines. The CC system can be used to deliver a variety or proteins and polypeptides, CC such as hormones, growth factors, enzymes, clotting factors, tumor antigens, viral antigens, parasitic antigens, tumor antigens, tumor CC suppressors, viral antigens, parasitic antigens, tumor antigens. The transporter system uses lysis agents to overcome the problems of CC endosomal/lysosomal degradation seen with prior art systems
